

SELECTBIO 2nd Annual Circulating Biomarkers Conference to be held in downtown Boston will emphasize Exosomes, Circulating Tumor Cells (CTCs), as well as Circulating Nucleic Acids found in biological fluids.

The focus is on these biomarkers as means to develop liquid biopsies for cancer and other disease classes. The speakers at this conference are from both academic and industrial affiliations, thereby providing a varied perspective and specific details on research technologies/methodology as well as applications.

Extensive networking and partnership opportunities with delegates from around the world. Excellent opportunity for researchers to present their research and find collaboration partners.

Agenda Topics

- Circulating DNA
- Circulating Tumor Cells (CTCs)
 - Potential as Liquid Cancer Biomarkers
 - Various Technologies for Capture and Interrogation
- Deployment of Next-Generation Sequencing to Discover and Interrogate Biomarkers
- Diagnostic Opportunities for Circulating Biomarkers [eg., Liquid Biopsies]
- Epigenetic Modifications of Circulating DNA [eg., Methylated Genetic Elements]
- Exosomes and Microvesicles
- Extracellular RNAs [such as microRNAs]
- New Technologies for Studying Exosomes/ Microvesicles/Extracellular Vesicles
- Non-invasive Prenatal Testing (NIPT) using Circulating Fetal DNA
- Therapeutic Potential Applications of Exosomes

Keynote Speakers

Xandra Breakefield

Professor, Massachusetts General Hospital

Nicholas Dracopoli

Vice President, Head Oncology Biomarkers, Janssen R&D, Johnson & Johnson

Robert McCormack

Head, Technology Innovation and Strategy, Veridex LLC/Johnson & Johnson

Gary Palmer

Senior Vice President, Medical Affairs, Foundation Medicine, Inc.

Johan Skog

Chief Scientific Officer, Exosome Diagnostics Inc
